Terragen 2 XfrogPlants Free Sampler (5 species x 3 ages) Benutzer-Information

5 Species x 3 Ages (15 Terragen 2 Models in TGO format)

To open the TGOs inside Terragen 2 simply click on the buttons "Object" then "Add Object", choose "Object" in the drop-down menu and select "TGO Reader".

Terragen 2 XfrogPlants Sampler (5 species x 3 ages) models are 5 Species selected from 22 XfrogPlants Libraries, available at www.xfrog.com and in the most important 3D online stores. Each XfrogPlants Library comes with all 9 different popular 3d formats: Bryce, Vue d'Esprit, OBJ, 3DS, Maya, 3ds max, Lightwave, CINEMA4D, and Xfr (Xfrog). Additionally, XSI 4.2 is supported thru an import plugin.

ZUCKER-BIRKE

(*Betula lenta*)

Baum, sommergrüner Laubbaum Gestalt: rundlich

Verbreitung: Nordosten Nord-Amerikas (Ontario und große Seen-Region)

Standort: humide Wälder

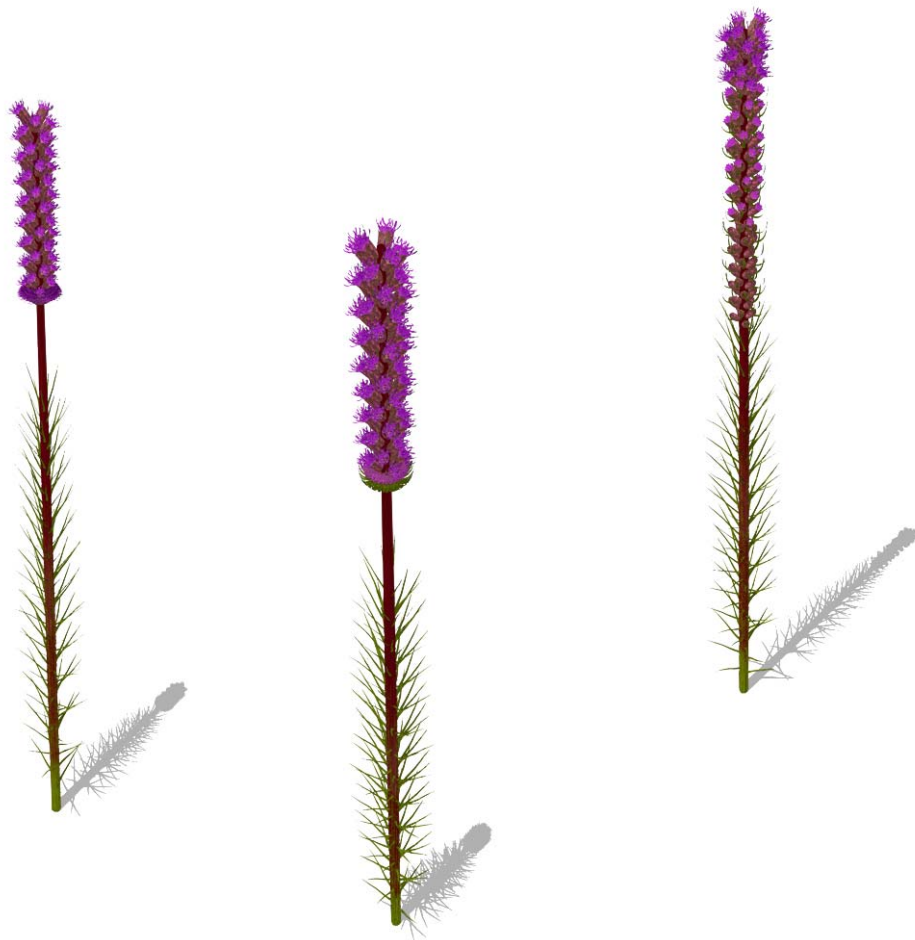

Klima: kühl, kalt

Bemerkung :

Die Zucker-Birke hat (wie viele Birken) eine geringe Lebensspanne. Das Holz dieses wichtigen Nutzbaumes dient dem Bau von Gebäuden und Schiffen. Rinde und Äste sind aromatisch und werden zur Destillation eines Öles genutzt.

PRACHT-SCHARTE

(*Liatris spicata*)

Pflanze

Verbreitung: Osten Nordamerikas (von Kanada bis Florida)

Standort: Prärien; auf drainierten Böden; Lichtpflanze

Klima: gemäßigt, kühl

Bemerkung :

Die Pracht-Scharte ist eine mehrjährige Pflanze. Sie benötigt durchschnittlich viel Wasser und wächst ziemlich langsam, ist aber sehr widerstandsfähig, sobald sie sich etabliert hat. Die Stängel wachsen aus einer Knollenwurzel. Blütezeit ist von August bis September.

KLETTEN-LABKRAUT

(*Galium aparine*)

Kraut, einjährig Blütezeit: Mai - September

Verbreitung: Europa, Asien, Nordwest-Afrika, Nord-Amerika

Standort: Unkrautfluren, Gebüsche, Ödland; auf
frischen, nährstoffreichen, humosen Lehmböden

Klima: gemäßigtes Klima

Bemerkung :

Das Kletten-Labkraut, auch als Klebkraut bekannt, besitzt an Stengel, Blättern und Früchten feine gebogene Haare, mit denen es sich an andere Pflanzen, Tierfelle und Kleidung anheften kann. Früher sagte man in England einem Mädchen, was unbemerkt ein Klebkraut am Rücken trug, einen heimlichen Liebhaber nach; beim Herunterfallen bildeten die Stengel dann den Anfangsbuchstaben seines Schatzes.

KÜSTEN-TANNE

(*Abies grandis*)

Baum, immergrüne Konifere Gestalt: kegelförmig, schlank
Verbreitung: westliches Nord-Amerika
Standort: Stromtäler; Täler; Berghänge
Klima: kühl

Bemerkung :

Die sehr schnell wachsende, schattentolerante Küsten-Tanne wird für Wiederaufforstungen genutzt. Sie ist kalteunempfindlich, hat aber besondere Standortansprüche: sie gedeiht nur auf gut drainierten, tiefgründigen und kalkreichen Böden. Sie tritt in Wäldern oft zusammen mit anderen Koniferen auf. Ihr Holz wird als Schleifholz verwendet.

SABAL-PALME

(*Sabal palmetto*)

Palme

Verbreitung: Ost-Küste Nord-Amerikas (von North Carolina bis Florida)

Standort: Küstengebiete

Klima: mild, warm

Bemerkung :

Die kälteunempfindliche Sabal-Palme (Staats-Baum von South Carolina) ist ein Wahrzeichen der Küsten von North- und South-Carolina, Georgia sowie Florida.

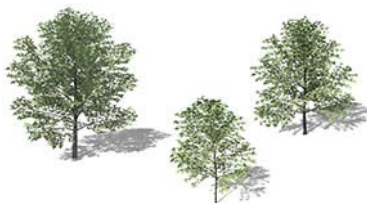

Die Blattknospen sind für Salate sehr begehrt, was der Sicherheit einer so langsam wachsenden Palme schaden kann.
